Yes, this facility is present in PHPKB knowledge base software so that you can restrict access to the knowledge base for only logged-in users. Please refer to the steps below to enable that setting.

1. Login to the admin control panel.
2. Go to the "Tools" » "Manage Settings" page.
3. There is a setting called "KB Access" as shown in the image below.

The screenshot shows the 'PHPKB Settings' page with several tabs: 'PHPKB Settings', 'Feature Settings', 'Article's Settings', and 'Miscellaneous Settings'. The 'General Settings' tab is active. Under 'General Settings', there are options for 'Down for Maintenance?' and 'Product Details'. The 'Product Details' section includes 'Software Version' (PHPKB 7.0), 'Admin Users' (25 (Upgrade License) | + Enter Upgrade License Key), and 'Support & Maintenance Period Till' (Jan 28, 2014 (349 days left) - Extend Support Subscription | +). There is also a checkbox for 'Show Dashboard Notification'. The 'Knowledgebase Settings' section includes 'Knowledgebase Name' (PHPKB 7.0 Beta Release) and 'Knowledgebase URL' (http://www.kbdemo.com/version7). The 'KB Access' setting is highlighted with a red box, showing two radio buttons: 'Restricted' and 'Unrestricted'. A tooltip box explains that 'Unrestricted' means KB is open to everyone for access, while 'Restricted' means only logged-in users can access the KB. Below this are sections for 'Mail Server Settings' and 'Database Settings'.

4. You can set it as "Restricted" so that only logged-in users can access the KB.
