Yes, this facility is present in PHPKB knowledge base software so that you can restrict access to the knowledge base for only logged-in users. Please refer to the steps below to enable that setting.

1. Login to the admin control panel.
2. Go to the "Tools" » "Manage Settings" page.
3. There is a setting called "KB Access" as shown in the image below.

The screenshot shows the 'PHPKB Settings' page with a red box highlighting the 'KB Access' setting. The setting is currently set to 'Unrestricted'. A tooltip explains that 'Unrestricted' means the KB is open to everyone, while 'Restricted' means only logged-in users can access it.

PHPKB Settings

KB Access
Unrestricted means KB is open to everyone for access. Restricted means that only logged in users can access the KB.

4. You can set it as "Restricted" so that only logged-in users can access the KB.
