

Adding a new article

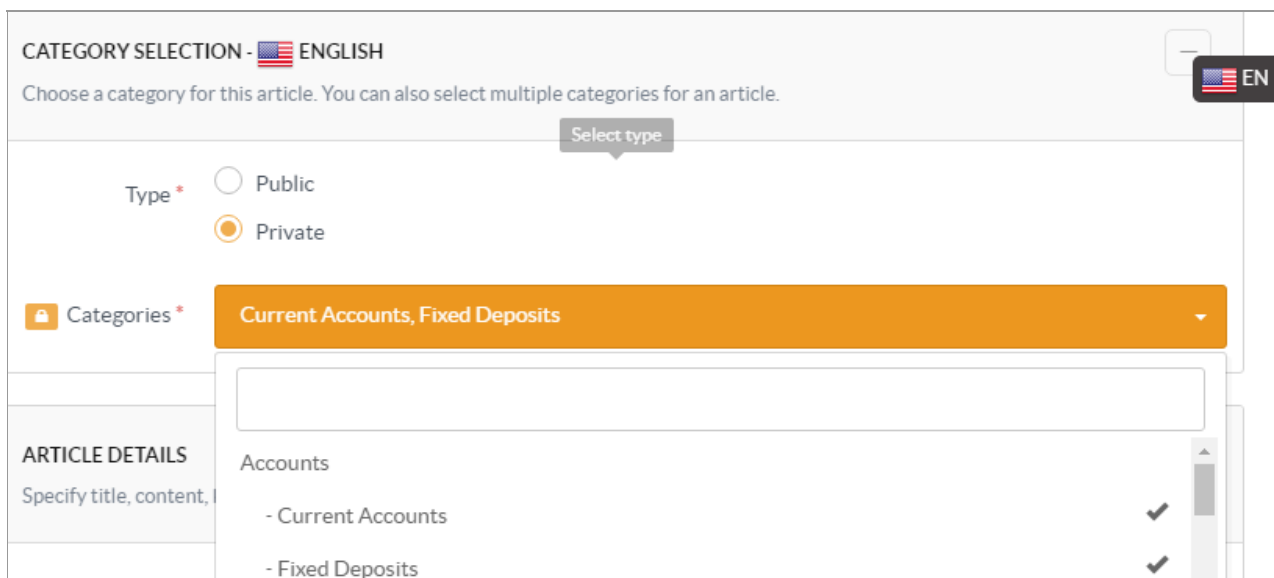

This article will provide detailed information (step-by-step instructions) on how to add/create a new article in the knowledge base using PHPKB software. There is a [video guide](#) at the bottom that demonstrates these steps to create a new article in the knowledge base.

Steps to add an article are as follows:

1. Expand the "**Articles**" section in the left navigation bar and click on the "**Add new**" link to open the "**Add Article**" page.

2. Select the "**Type**" of the category. With **Public** type, an article will be published under public categories and will be accessible by all end users. With the **Private** type, the article will be visible to logged-in users only.
3. In the multi-language edition, the **language name** in which the article is being created is mentioned with panel heading. As shown in the screenshot below, an article is being added to the English language, so, English is written with the panel heading 'Category Selection'. You can change the language from the **language drop-down** available on the right side, whereas, in non ML editions, the language menu is not available.
4. "**Choose Categories**" as per the requirement of the article. The article can be assigned to multiple categories, by selecting them from the categories drop-down.

5. "**Title**" can be a question, a caption or a headline of your article. It is not allowed to add multiple articles with the same title under one category.
6. "**Content**" inscribes the body of the article. PHPKB provides a powerful WYSIWYG editor with various features for formatting your content just like MS-Word.

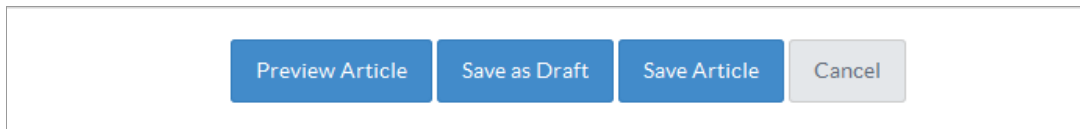

11. "**Custom Fields**" display the custom fields you have created for your knowledge base articles. Refer article [Adding a Custom Field](#) for more details.

12. Click the "**Preview Article**" button to preview the article (even unsaved) with the latest changes as it will be published to the front-end users. Authors are advised to preview the article once before publishing.
13. Click the "**Save as Draft**" button to save changes as your personal draft. You can continue to edit this draft later on and can save it as an article or delete it.
14. Click the "**Save Article**" button to store your changes and publish the article in the knowledge base.
15. Click the "**Cancel**" button to return to the 'Manage articles' screen without saving the changes you have made in the

article.
